Available Blood Tests

Cholesterol

3 mins

Why Do the Test? A complete cholesterol test can help find out whether your cholesterol is high. It also can help gauge your risk of heart and blood vessel diseases. A complete cholesterol test measures the amounts of four types of fats in blood - TCH, LDL, HDL and TG.

Vitamin D

8 mins

Why Do the Test? Adequate Vitamin D levels support bone health, immune function, and moodregulation.

HbA1c - Diabetes

5 mins

Why Do the Test? Regular testing aids in monitoring and managing diabetes effectively.

hs-CRP - Heart Screening

3 mins

Why Do the Test? Testing your high-sensitivity C-reactive protein (hs-CRP) levels is an essential step in understanding your cardiovascular and overall health.

RF - Rheumatoid Screening Arthritis

15 mins

Why Do the Test? By analysing RF levels the test identifies markers of autoimmune activity, providing insight into possible disorders such as rheumatoid arthritis.

Cortisol - Stress Hormone

15 mins

Why Do the Test? This marker is critical for regulating your body response to stress, metabolism and well being.

Cystatin C Level - KidneyScreening

3 mins

Why Do the Test? The Cystatin C test is a precise way to assess kidney function by measuring the amount of cystatin C in your blood.

Folate

15 mins

Why Do the Test? This marker help reveal how the body is making new red blood cells, repairing tissue, making DNA and maintaining nerve health.

Ferritin - Iron Levels

15 mins

Why Do the Test? The Ferritin Test is a crucial diagnostic tool to assess your body 's iron storage levels.

Schedule your test now and get fast, accurate results.
